

Lab 1-Printing a hex number as binary (C++)

[New Attempt](#)

Due Jun 16 by 11:59am **Points** 10 **Submitting** a file upload
File Types c, cpp, txt, and h

This is a C++ program.

The user types in a hexadecimal number. 0,1,2,3,...,9,A,B,C,D,E,F

You convert that to binary and print a message. For example, you might print: 30 hex = 00110000 binary.

Do the conversion with a function.
